

1 explain it.

2 Actually, it's pretty good forensic countermeasure.
3 Give him credit because if it's on the bed and there's blood
4 on it, well how are you going to explain that?

5 But you put it over her body and there's blood on
6 it, well it must have come on when she got out, when he put
7 it over her.

8 Next. And I respectfully submit to you, was she
9 ever in the tub at all? Well there's -- it is clearly
10 reddish tinted water so, clearly, some part of her was in
11 the tub. Some part of her was in the tub. I respectfully
12 submit, based on the evidence, you can infer the only part
13 that was in the tub was the face, the part that was
14 bleeding. But don't take my word for it.

15 Next. If she was in the tub like he says she was,
16 if she was in the tub the whole time, why does she still
17 have blood spatter on her legs and feet?

18 Why are there blood drops?

19 Why weren't they washed off in the tub if she was
20 ever -- her body was ever in the tub?

21 Now you understand why there was no water on the
22 floor. Now you understand why he was bone dry. Now you
23 understand why he wasn't wet, and there was no water. The
24 only part of her that was in the tub was her face.

25 Look at all these blood drops. Now we are up on
